A Cloud content delivery solution / Real time Energy Dashboard

## HOW IT WORKS

Use the power of the cloud to deliver content dynamically to remote locations.

**Green Media HD** provides a secure and cost effective means of delivering digital media content for promotions, advertising fundraising, energy monitoring and messaging with background music to electronic signage displays.

Our Web based application allows you to modify the delivery content from a computer or smart phone.

We deliver your content to a small appliance that is connected to the display and houses the content that is updated every 60 seconds via a request from the edge device to insure a high level of security and crystal HD 1080 definition.
